## /star-seeker/favourite

## Feature ideas:

- Breadcrumbs
- Favourite button on searched journeys
- Search to filter the gates on display
- Login authentication if there is time
- Light/dark mode if there is time
- Snack-bar confirmation once a journey has been saved
- Loading state when fetching from the api e.g. loading spinner or skeleton

 A fixed modal closer to the top of the page that allows the use to enter two values i.e. "from" value and "to" value.

List all saved journey that

based on current date

Order visually by date added

persist from state.

- Only display destinations that a user can travel to based on the from value
- Display the cheapest flight to the user based on todays date

## **Journey Itinerary**

- A Fixed modal on the home page that users can interact with to calculate the cost of travel
- On entry submission, the user should be presented with a cost breakdown for the journey and a recommended mode of transport e.g. personal vehicle
- CTA: The use has the ability to star/favourite a journal. The star should persist as highlighted if selected

## **Gates**

- This should show all the gates on the home page
- On the gate details page display the related gates/ destinations you can travel to based on the selected gate
